SECTION 6:

TECHNICAL SPECIFICATIONS

I GENERAL

1.1 Scope of work

The scope of work under this contract includes the following

1.1.1 All work shall be done as per the specification, The works shall include providing all materials, equipment, labor, tools, plant, transport etc., and all other services necessary for the complete construction including necessary sub-soil investigation.

1.2 Royalties - APPLICABLE AS PER RULES.

1.3 Site Order Book

1.3.1 The contractor shall maintain an identical pair of site order Books (one marked original and the other marked duplicate), at the site at all times during the execution of the works for the use of the Engineer and the contractor, All instruction issued by the Engineer to the Contractor shall be recorded on both sets of the site order book and shall be signed by the issuer and countersigned by the contractor. After compliance with the instruction, the contractor shall record the same in both sets of the site order book duly signed and counter signed by the Engineer, Acceptance of any part of the work executed by the contractor shall be subject to verification with respect to compliance of respective instruction of the Engineer through the site order Book. The Engineer shall retain the original copy of the site order book, while the contractor shall retain the duplicate one.

1.4 Technical Specification

1.4.1 Engineer shall have the right to modify/alter the particular Specification and or standard specification at any time which promise to confer equal or better quality than the standard specified in the tender document, Such modification or alteration shall be acceptable to the contractor subject to no additional financial burden to either the contractor or the employer.

2. Safety measures

The contractor shall provide adequate safety measures during excavation. They shall include.

1. Barricading all sides of the open trenches.
2. Red danger lights which can be easily visible from dusk to dawn placed at an interval of 20mm
3. Traffic signals and display boards giving direction of traffic at the appropriate places as may be directed by the Engineer.
4. Adequate safe wooden plank/board or steel plate over the trenches to facilitate crossing by the public residing on either side of the trench.
5. Round the clock watch and ward maintaining all safety regulations at the site of work and protecting the site from unauthorized instructions.

IV BCK FILLING: AS per IS

3. Ordinary Concrete

In case of ordinary concrete, mix is not required to be designed by preliminary tests and proportions of cement, fine aggregates and coarse aggregates are specified by volume. The ordinary concrete shall be in four grades designated as M-7.5, M10, M15 and M20. It can be

specified by volumetric mix as given in Table-4 below. For cement which normally comes in bags and is used by weight, volume shall be worked out taking 50 Kg of cement as 0.035 cubic meters in volume. Shaking, ramming or hammering shall not be done. Proportioning of sand shall be as per its dry volume and in case it is damp, allowance for 'bulkage' shall be made as per IS : 2386(Part III).

Ingredients required for ordinary concrete containing one bag of cement for different proportions of mix shall be as given in Table-4 below.

1. Strength Requirement of Concrete.
   Where ordinary Portland cement confirming to IS.269 or portland blast Furnace cement conforming to IS : 455 is used, the compressive strength requirements for various grades of concrete controlled as wellas ordinary shall be as given in table-5. Where rapid hardening Portland cement is used , the 28days compressive strength requirements specified in Table be met at 7days.
   For controlled concrete, the mix shall be so designed as to attain in preliminary tests a strength at least 33per cent higher than that required on work tests for concrete up to and including M25, and 25per cent higher for higher grades. Preliminary tests nee not be made in case of 'ordinary concrete'.

TABLE-5
Strength Requirements

Grade of concrete	Comprehensive test strength on 150mm cubes after testing in accordance with IS:516 (N/sq.mm)	
	Minimum at 7days	Minimum at 28 days
M10	7	10
M15	10	15
M20	13.5	20
M25	17	25

In all cases, the 28 days compressive strength specified in Table-5 shall alone be the criterion for acceptance or rejection of the concrete.

Where the strength of a concrete mix, as indicated by tests, lies in between the strength for any two grades specified in table-5, such concrete shall be classified for all purposes as a concrete belonging to the lower of the two grades between which its strength lies.

1. Use of plums in ordinary concrete.

Stone plums shall not be used unless specified in the drawings, when stone plums are used, the size may be from 150 to 300mm. The Maximum dimension of these stones or plums shall not exceed 1/3rd the least dimension of the member.

All plums shall be hard, durable, clean and free from soft materials or loose pieces or deleterious substances in the and shall not have sharp corners.

During concreting the first Layer of concrete of the specified mix shall be laid to a thickness of at least two and a half times the thickness of the maximum size of plums to be used, The plums shall then be laid while the top portion of this concrete

is still green but sufficiently stiff to prevent complete submergence of the plums under their own weight. These plums shall be about half embedded in the concrete and the remaining part exposed so as to form a key with the next year of concrete, No plums shall be used for concrete – laid under water.

While placing the plums, care shall be taken to see that the clear distance between any two plums is not less than either the width or thickness of either of the plums. The distance from plums to the outer surface or from any steel reinforcement shall be equal to greatest width of the plum.

If plums of stratified stone are used, they shall be laid on their natural bed, stones with concave faces shall be laid with the concave faces shall be laid with the concave portion upwards, the thickness of the next and successive layers of concrete shall be at least twice that of the largest plums, The total volume of plums shall not exceed 15% of the volume of the finished concrete.
